3X Systems Enters into Agreement with Foreseeson Technology to Distribute Private Cloud Backup Appliance to Canadian Computer Resellers

The award-winning 3X RBA® appliance for backup in the cloud is now available for small and medium businesses in Canada.

Columbus, Ohio, November 22, 2010 - 3X Systems, manufacturer of the 3X RBA® Remote Backup Appliance, announced a distribution agreement with Foreseeson Technology, of Richmond, British Columbia. Foreseeson Technology will distribute the 3X Systems portfolio of backup appliances through its network of Canadian resellers. By expanding its distribution into Canada, 3X can help more small and medium organizations, as well as divisions of larger companies, to easily and automatically implement secure private cloud infrastructures for complete control, governance, and protection of all of their data in a cost-effective unified manner.

“3X Systems is very pleased to be able to offer our revolutionary backup solutions through Foreseeson,” said Alan Arman, Founder and CEO of 3X Systems. “Foreseeson’s IT Distribution Division’s expertise in high-availability, disaster recovery, storage, networking and virtualization solutions makes them a natural partner for our Remote Backup Appliance (RBA) products. We look forward to a long relationship bringing value to Canadian resellers and end users.”

“We are excited about bringing the 3X backup solutions into our IT offerings,” said Brian Cherrin, General Manager, distribution division of Foreseeson. “The 3X RBA enables businesses to easily deploy a private backup cloud that combines the benefits of high-speed, on-premise backup with the convenience of remote backup for true disaster recovery – without monthly recurring fees. Our resellers will be able to offer a robust backup solution at an affordable price-point with the capability of hosting the RBA and managing it for their clients.”

3X Systems offers three RBA solutions to align with customers' data volumes: 500, Tera, and Enterprise series. Each enables businesses full data backup and recovery and automatic connection to servers, desktops, and laptops on one appliance. The unique private cloud architecture keeps a client's data safe, private, quick-to-recover and always in their possession. Sold exclusively through resellers, the 3X RBA product line provides data de-duplication for maximum storage capacity and SSL encryption for total data security.

About 3X Systems

3X Systems is the creator of the award-winning 3X RBA® Remote Backup Appliance, a [private cloud](#) appliance for backup anywhere.
